## Work Experience

### **WeWander** - City Discovery Mobile Application

- WeWander is a city discovery app which helps users discover attractions, restaurants and venues in a faster, more convenient way. By using a Tinder-like swipe mechanism, the user gets information about places of interest from a deck of cards pulled from our library. You can swipe right to save place to your offline map or left to never see it again. You can filter new cards or save cards by distance or type of activity to see the most relevant restaurants, attractions or sites of special interest nearby. With WeWander, you no longer need to browse through hundreds of pages to find what you're looking for.
- **Tools:** Ionic 2, Google Maps API, Native APIs, Third Party Libraries, GIT.

2018 - present

### **Kissed by light** - Boudoir & Portrait Studio in Toronto

<http://kissedbylightphoto.com>

- Kissed by light is a photo studio website made on Wordpress. Main tasks were to create a responsive website with good loading time and high-quality photos, migrate old database to a new hosting, attach a new website to an existing domain while supporting all the previous links and not lose Google ranking in the process.
- **Tools:** HTML, CSS, JS, PHP, Wordpress, Hosting, CDN, SEO.

### **Wanderlust** - Travel planner web app

<https://wanderlustapp-822a0.firebaseio.com/>

- Wanderlust is an online travel assistant that helps you plan your dream trip. Create your trip and add the cities you want to visit. Wanderlust will let you know if you don't have transport to get from one city to another or a place to stay. It also allows you to keep track of your budget and save interesting information and useful tips in the notes section. You can organize a group trip by inviting your friends. In group mode, all of you have access to the details of the trip, so everyone can add, change or delete them and you can also discuss your travel plans right there on the trip page with our instant messenger.
- **Tools:** Angular 4, Google Maps API, GIT, Bootstrap.
